## SEXUALLY TRANSMITTED INFECTIONS

Nearly half of all new STD cases are in young people between the ages of 15 and 24.\*

In 2009, young persons (ages 13-29) accounted for 39% of all new HIV infections in the US.\*

There were 1.4 million new cases of chlamydia in 2011, people aged 15-24 had 4 times the reported rate of the total population.\*

## MENTAL HEALTH

Every 13.7 minutes someone in the United States dies by suicide.\*\*

90% of people who die by suicide have a diagnosable and treatable psychiatric disorder at the time of their death.\*\*

Males between ages 15-19 are five times more likely, and between ages 20-24 seven times more likely than females to commit suicide. Over 80% of suicide deaths are men.\*\*\*

<http://www.webmd.com/mental-health/recognizing-suicidal-behavior>

## ALCOHOL ABUSE

Men are more likely than women to drink excessively and take other risks (e.g., drive fast or without a safety belt), increasing their risk of injury or death.\*

Men consistently have higher rates of alcohol-related deaths and hospitalizations than women.\*

Alcohol use by men increases the chances of engaging in risky sexual activity including unprotected sex, sex with multiple partners, or sex with a partner at risk for sexually transmitted diseases.\*

## GAY AND BISEXUAL MEN

The rate of new HIV diagnoses among men who have sex with men (MSM) is more than 44 times that of other men.\*

The rate of primary and secondary syphilis among MSM is more than 46 times that of other men and more than 71 times that of women.\*
